Licensing from Automation Studio
on a PC without an Internet connection

Automation Studio is usually licensed automatically over the Internet. In the event that the PC on which Automation Studio is installed is not connected to the Internet, licensing can take place using a second PC that has an Internet connection.

To do so, complete the following steps:

Customer (on the PC with Automation Studio):

1.) Before you start, download this file onto the PC with Internet connection, copy it e.g. onto a USB stick and then copy it onto the offline PC where Automation Studio shall be licensed.

Link for the file: .wbb file.

2.) Double click the .wbb file that you have copied onto the offline PC with the Automation Studio.

Alternative: Open Code Meter by open the Windows start menu, enter "CodeMeter", confirm by pressing Enter and import the .wbb file via drag and drop

3.) Accept the question "Do you want to import the License File" with Yes.
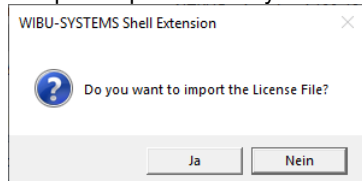

4.) Select the so called license container ("CmContainer") that appears in the left part of the window as you can see in this Screenshot.
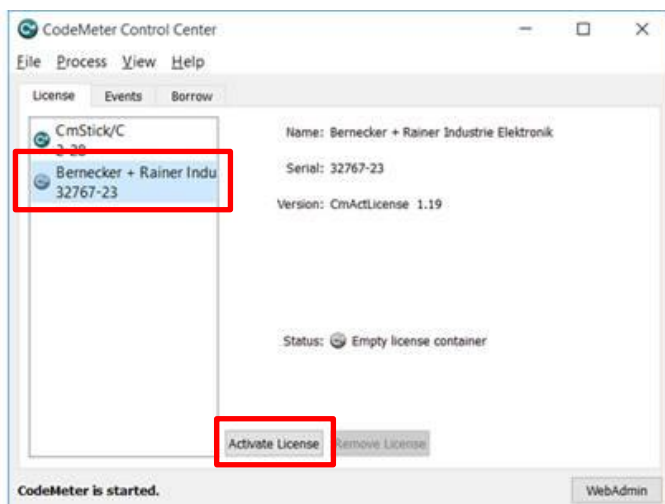

5.) To create a request file click "Activate license" and "Next" in the next appearing window

6.) Now select "Create license request" and click next

Next

7.) You have to choose the filename (take the proposed) and location where the request file shall be saved and press "Commit".
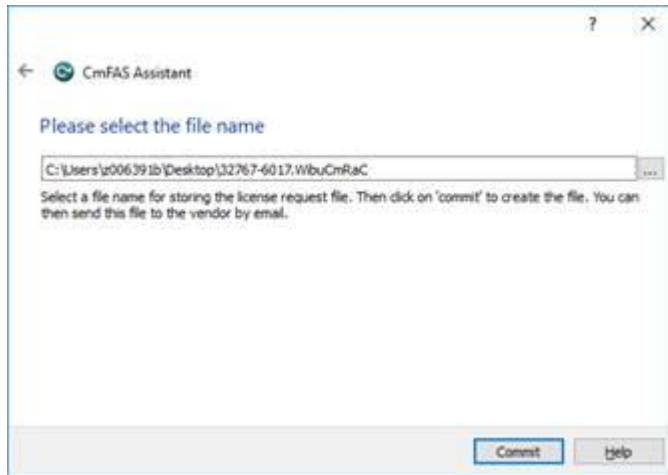

8.) Transfer the file to a PC with Internet access (e.g. save it to a USB flash drive or equivalent).

9.) Send the file and the license key to B&R International Support/ your B&R Contact

B&R employee:

10.) Enter the license key in field at the bottom and press Send
(https://www.br-automation.com/en/service/automation-studio-offline-licensing/)

11.) Choose the .WibuCmRaC file from the customer.

Licensing from Automation Studio on a PC without an Internet connection

Available license type	**1TGSWAS.TRL.00-01**
Request file (.WibuCmRaC)	Choose File No file chosen
	Send

12.) A download for the.WibuCmRaU file should start automatically. Send this file back to the customer.

Customer: After you have received the License File from B&R International Support

13.) Transfer this updated .WibuCmRaU file to the offline PC with Automation Studio (e.g. using a USB flash drive or equivalent).

14.) Double-click on the update file in Windows Explorer.
Alternative: Only if the above method would not work, you could drag and drop the file into the "Codemeter" program

15.) Automation Studio is now licensed successfully.
